

Operation: King George | The Georgian Decentralized Capital Market [GDCM]. |

A Socio-Economic Decentralized Digital-Asset Market. Independently of the Georgian people as shareholders of their own capital market economy. Each as independent asset-class owners within their own market via their digital representation of their market capitalization as a shareholder within the Georgian economy. Built with equitable reach with only their own capital effort can be the determinant to any market capitalization ownership per Georgian Citizen of The Republic of Georgia.

To build, trade, partner, sell, import, export, liquidate, invest, and own its capital value within a digital capital market state economy. This ensures that the people have a direct democratic regulatory system in all financial matters of regulating the financial market. This ensures that all capital is decentralized, transparent, secure, and visible. You can not hide the money, but you can in how you physically use it. That is your prerogative, you have choice after all. The capital itself is and will be present, bad operators in violation of the **GDCM MARKET PROTOCOLS OF FINANCIAL INTERACTION WITHIN THE GEORGIAN FINANCIAL NETWORK (GFN) AMONGST THE CITIZENS OF THE REPUBLIC OF GEORGIA**, will simply be blacklisted on the **GGB [The Georgian Global Blacklist]**. Democratically voted on a 1-Call-All Governance Protocol (1CA Governance). Each vote regardless of market ownership, asset-class, identity-class, race-class, or any other category of marking, a type of category of person does not hold any weight. Everyone's vote is equal to 1. Your vote, for your capital market, is all equal to one. 50% of the market governing power sits in the hands of the Georgian Public. The remaining 50% sits with the **Georgian Market Regulator (GMR)**. Thirteen elected Institutional Market Regulators (IMRs) directly elected by the entire **Georgian Decentralized Capital Market Share-Holder Economy**. One vote all. Three consecutive years of service, simply for ensuring not overused, short time periods for the Georgian Public to act upon their financial market. And directly create as necessary per the consensus of the Georgian Public for the Georgian Decentralized Capital Market.

Each Georgian Citizen becomes an Independent Digital-Asset Shareholder of a financial capital market economy. The Georgian Economy, of and by, the people of the Republic of Georgia.

With independent capital. Independent capital assets. Independent financing. Independent Regulatory Control of the Georgian Economy. That is the best part, you become simply a shareholder of your market. Your vote on anything is only equated to one. A direct financial market economy with set-in vote structuring.

To reduce any influence of anyone being able to sway undo control within the market economy. This way even if you do sway opinion, it will be one by one. And not because of anything else, it is about you as an independent collective, who will decide as best for the market economy. With

people that your people and your communities trust, they will be elected to carry out your singular decisions on what is best for the Georgian Economy.

The People of Georgia will directly have the power to control their financial capital market economy. Directly creating stability per each Georgian Citizen to create a true Democratic Georgian Financial Capital Market Economy. Democratic regulation. Democratic financial ownership. Democratic weight as a single vote regardless of ownership. To decide market decisions with elected financial market assessors and resolutions to guide the best course of actions and educate the entire collective.

That is within the digital bylaws of the regulator position of the market. You have to educate, not lecture, educate to come together as a general conscious market collective on the best course of action for the true Democratically Owned Georgian Decentralized Capital Market (GDCM) owned by the Citizens of the Republic of Georgia.

GGMX - Georgian Global Market Exchange [This will serve as the Investment-Service Marketplace (ISM) for the GDCM, creating a direct decentralized digital market that is equally accessible in relation for financial transactions and investments amongst the Citizens of Georgia.]

- A Socio-Economic Decentralized Investment-Service Market Exchange System
- Facilitates direct capital ownership in the hands of the Georgian Public. The infrastructure of the ISM is equally accessible to all users of the GDCM. Giving each Georgian Citizen the ability to directly create direct asset ownership via decentralized finance.
- Companies, Brands, Corporations, Institutions, Conglomerates, Investment Firms, Asset-Managers, Consumer Goods, Perishable Goods, any form of investment and or service of the Georgian Economy can be digitized by each person to directly transact in the financial value of the goods, products or services. And to have the Georgian Public have direct distributed capital ownership in the investments of the Republic of Georgia.
- Any form of entity can digitize its functionality as a digital-asset and create an independent market valuation of the asset based on the capital valuations owned by each person and or entity. Creating a digital independent market capitalization of each entity and or person that can be directly translated into any and all financial transactions for the Georgian Economy.
- Complete Digital Capital Market Economy owned by the Republic of Georgia and its Citizens.
- You become the capital asset yourself to exchange for higher capital value amongst others within the market.

- Governance: No predatory pricing on goods to citizens, they will be able to see fair market valuation for corporate labor and in relation to their market currency to make sure they are getting a fair valuation worth. Anything that you do to affect the market stability is on you. And it does not need to be tolerated at all.
- The good thing for companies is that they in their entirety become their own asset-class of their market capitalization of their business (\$ worth), via a digital token and or coin on the Georgian Financial Network Protocol (GFN Protocol).
- They via their digital asset can have Investment Capital as a traded digital asset on GGMX that the entire Republic is trading at scale. Service Revenue as the same digital asset of the company can be used to directly purchase anything of financial value from each company. Using GGX the digital currency singular form of payment to pay for any and all materials present within the Georgian Global Market Exchange (GGMX).
- You yourself become the "Stock of Value " as equitable shareholders in financial voting power within the Georgian Economy as each equitable Georgian Citizen is held within the Republic of Georgia.
- You become the market as an independent market mover (yourself) with your own market value as an asset. And as a market maker (the capital value you have built under your own market value. Remember as you now have the infrastructure to build independent capital. At this point, it is simply about your work. It's equitable to all of you. The People of the Republic of Georgia. It is your true Georgian Economy. The Georgian Decentralized Capital Market Economy (GDCM)) to directly create financial markets around you, others, and entirely within the GDCM which will collectively drive up the Georgian Economy via independent market ownership of each person under a market economy.
- You now have unlimited financial power to build it amongst yourselves as the value of and by the Georgian People to create independent capital mobility within a Democratically Independent Georgian Capital Market Economy.
- A single-shareholder collective capital market economy system.
- Yours, Thiers, Ours.
- Pure to Georgian Authenticity of ownership and consecrated by Georgian blood to direct power as a single collective to financially drain all directives of financial operators that threaten The Sacred and Financial Sovereignty of The Republic of Georgia.
- Directly bringing absolute power of financial autonomy outside of the Global Market Economy with direct ownership of the market held within the hands, feet, eyes, and hearts of each Georgian Citizen as an independent financial market of value within their own independent democratic single-shareholder capital market economy.
- The people themselves can transact their direct capital value and build on capital ownership where their financial transactions do not come as a detriment to the global environment, any and all Georgian Citizens of the Republic of Georgia with and will act

upon equitable financial infrastructure as an independent digital asset class to grow capital within the capital market as their own.

- An **Open-Closed Insular Decentralized Capital Market Economy**. You grow even without the global economy coming to you because now you as a People have independent capital mobility amongst each Georgian Citizen of the Republic. Now the global economy is directly investing into the Asset of Georgia and all of Georgia's Capital Market Assets. Directly in the Stock of Value of Investment within the Citizens of the Republic of Georgia.

Georgian Decentralized Capital Market Assets (GDCM) - (GGX/GGM)

(GGX) = Georgian Global Exchange, it is the market currency. A multi-purpose currency that is the singular form of digital payment within the GDCM. It will grow in price value or decrease in price based on the market performance of the Democratic Georgian Financial Capital Market Economy, like a stock. The Stock of Value directly in the People of the Republic of Georgia. Directly in the hands of each Georgian Citizen.

[\$1, \$5, \$10, \$20, \$40, \$60, \$80, \$100, \$200, \$300, \$400, \$500, \$600, \$700, \$800, \$999+]

Directly increasing the purchasing power of each Georgian with direct leverage in their market as they have an independent capital market collective built in the value that supports the value of the Georgian Economy. They have control within the market they control. Directly realigning the direction of capital mobility and financial ownership with growing or decreasing (market performance) within the Stock of Value (GGX Token) within the Public of the Republic.

Directly backed on the Georgian Financial Network (GFN), per its market capitalization directly creating the value for GGX Token. This will function as an asynchronous byzantine fault tolerance protocol (aBft), complete decentralized ownership within a decentralized capital market economy. The more the Georgian Citizens build digital representation of their assets they can all collectively grow their market value amongst the Republic of Georgia. Gross Domestic Product (GDP) directly powered by the market value of each Georgian Citizen as a Georgian Market Maker and Georgian Market Mover within the people's financial market of the Republic of Georgia.

GGX will function as the singular payment stock of Georgia that will directly stabilize payment on a single element of value. The People of The Republic of Georgia. With its value tied to the growing value of the Georgian Financial Network (GFN), it only comes down to the People themselves building their independent assets within the market infrastructure which then collectively drives the growing or slowing of economic value within the Georgian Economy.

Remember, you are an Open-Closed Decentralized Capital Market Economy. Everyone can see what you see, but not everyone can see what, you, see. It is a transparent financial market economy, they see you, but they don't actually see you. I only say that as is, because it is truly to each own discretion. As long as you accept the consequences, then your actions are your actions. That is the point of a completely transparent financial market system. Simply comes down to you as a person.

(GGM) = Georgian Global Market, will serve as the market doorway for any outside currency to convert directly into GGM Coin and then into the GGX Token this way the flow of the global capital market economy is directly investing into the Stock of Value held amongst the Citizens of the Republic of Georgia.

The Global Economy vs. The Republic of Georgia.

Georgia wins. Insular Capital Market Economy. They have themselves to grow the Stock of Value amongst the People of the Republic. This way, Georgia always bets on Georgia, and even without your bet on Georgia, Georgia Wins.

Directly converting into GGX Token, remember we want the transactional monetary volume and economic equity that interacts with and within the Georgian Decentralized Capital Market to create the drive to bring direct capital value into the hands of each Georgian Citizen.

You are betting on Georgia. You are betting on us. What do you think is going to happen? We Win.

We are Georgia.

This is what I call the structure of an Open-Closed Economy. Within a digital decentralized democratic socio-economic capital market economy system with direct market power as a single-vote shareholder of independent asset and market valuation strengthening the stock of value (GGX) within each Georgian Citizen of the Republic of Georgia.

Open-Closed Georgian Decentralized Capital Market Single-Shareholder Digital Economy

{Global Market Currency, \$} - > (\$GGM) <- (\$GGX) -> (\$GGM) -> {Global Market Currency, \$}

This allows the GDCM to become an Open Decentralized Transparent Shareholder Market Economy that can grow independently on its own as an insular capital market economy. Simply digitized to go at the speed of the internet. The global economy is directly investing into the

global economy built via its digital market capitalization of the markets within the Georgian Decentralized Capital Market (GDCM).

The world interacts directly with The Georgian Market, and even without it the market will grow because the **Stock of Value** is now equitably held in their economy amongst each Georgian Citizen of the Republic of Georgia.

Georgian Financial Network (GFN)

An Asynchronous Byzantine Fault Tolerance built protocol ensures the Georgian Decentralized Capital Market stays as an absolute single vote shareholder economy. You have an abundance in the ability and potential of capital creation. But no capital value or capital creation has any weight on the market governance. The removal of finance in governance but still financially governed democratically amongst the Citizens of Georgia as independent asset-shareholders within their digital economy, so it can transact at the speed of the internet. This is to ensure that each Georgian becomes a single-vote shareholder within their capital economy without any form of exterior tolerance, as the power lies directly within each Georgian Citizen through their digital wallets. (“**GPay**”) The single point payment software for all forms of financial transactions within the democratic financial economy.

You are able to grow financially independently by having a private market that will grow your stock of value by giving your assets within the digital market mobility to either decrease or increasing its market value and in turn the GGX Token and GGM Coin which serves as the “Door” to the Georgian Economy and “Currency” of the Georgian Economy, grow or decline naturally simply from the capital mobility of the global economy interacting with the global economy interactions of each Georgian Citizen within the Georgian Decentralized Capital Market (GDCM). That just comes down to business at the end of the day. This way it's a level playing field on both sides. One to One. One of One. One from One. One.

Growing the market independently brings stability to conquer global market operators as it functions as open-closed economy. It grows simply based on the work of the Georgian People. They are the determinant of driving up the Stock of Value in Georgia. That cannot be stopped, it directly counters sanctions because it has direct market sovereignty which is directly held in the hands of each Georgian Citizen of the Republic of Georgia. They have direct financial power via the Georgian Global Blacklist (GGB) to ban any and all financial market interactions that come from any originating sovereign financial power from interacting with the democratic capital market economy system of the Republic of Georgia. The People of Georgia directly voted with the Georgian Market Regulatory (GMR) to register a sovereign financial power on the GGB.

This market feature is designed to directly block any and all financial transactions that interact with the Georgian Global Market (GGM COIN) that serves as the “Door” to the Georgian

Decentralized Capital Market (GDCM). Once on the Georgian Global Blacklist (GGB) then the entire share-holder economy must vote to decide if someone should or should not be permitted to engage in financial transactions with the Georgian Economy via the Georgian Decentralized Capital Market (GDCM). This is directly protecting the Georgian Global Exchange (GGX) market currency from political volatility, this way the price in value for the People of Georgia is simply because of the People of Georgia. Complete Democratic Financial Market Autonomy. This is the reserved power within the Georgian Financial Network (GFN) that sits within the users of the Georgian Decentralized Capital Market (GDCM).

They are an independent capital market economy with currency buying the stock of value in their people.

(The Georgian Decentralized Capital Market - [GDCM] -)

{The Georgian Financial Network Protocol - [GFN PROTOCOL] -}

- (aBft) Blockchain Protocol that will function as the (OCE), Open-Closed Economy.

On top of the GFN is GGMX.

{The Georgian Global Market Exchange - [GGMX] -}

- A Decentralized Socio-Economic Digital Asset Exchange with its own Investment-Service Marketplace (ISM) for all Georgian Citizens of the Republic of Georgia to digitize their assets and grow the economy with its investments and financial transactions of its economy at the speed of the internet.

{The Georgian Global Exchange Currency - [GGX] -}

- A singular payment digital asset that grows as per the Market Capitalization in the transactional monetary volume of the GDCM with distributed economic equity amongst the citizens amongst its market targets as well as independent capital ownership and shareholdership. The GGX Token will function as the Stock of Value within the People of Georgia and serve the financial processing of any transactions of the Georgian Economy for all Georgians.

{The Georgian Global Market Currency - [GGM] -}

- A singular market currency system that will function as the doorway asset to convert financial currencies into the Georgian Global Exchange Currency (GGX). Using the natural capital mobility of their assets to serve two primary objectives.
- 1) To bring exclusivity of who can interact with the Georgian Decentralized Capital Market as per the interest of the Republic of Georgia as per the People of Georgia. Their words. Their wills.

- 2) An additional asset that will bring even further financial power into the hands of each Georgian Citizen as they each hold a tangible financial asset that shows the exclusivity of their market. They win on both ends.
- You interact with them, even if they don't with you.
- And they interact amongst themselves, as they have stock in each other, even if you don't with them.

Total Digital Asset Class Supply:

Georgian Global Exchange (GGX)

- **100T GGX Token Total Supply**
- 99.9T GGX Token sits openly accessible to the entire Georgian Economy via GDCM.
- 100B GGX Token sits with JBS
- GGX can function as an IDAO
- Independent Digital Asset Offering: An independent market asset that functions as a stock yet part of an independent insular digital economy.
- Georgia can then directly vote to have the Currency of GDCM directly listed on a Sovereign National Exchange directly driving the capital liquidity of an entire national market exchange to the Stock of Value within the Republic of Georgia and within each Georgian Citizen.
- NYSE: GGX @ \$3.50 opening per GGX
- Total Market Capitalization of GGX - (Shares Outstanding) x (share price) = (100T GGX) x (\$3.50 USD) = \$350T USD Market Capitalization for the Georgian Decentralized Capital Market Economy (GDCM)
- Georgia now can operate as a single financial power with the financial power of 4.357x the Gross World Product of the Global Economy.
- **GWP - \$75.59T USD**
- **GDCM - \$350T USD**
- **Russian GDP - \$1.578T USD**
- **GDCM - \$350T USD**
- **American GDP - \$19.39T USD**
- **GDCM - \$350T USD**
- **Directly positioning Georgia as a Sovereign Independent Financially Autonomous Superpower.**
- **USA - China - Japan - Germany - UK - “Georgia”**
- Georgia has independent financial autonomy, that all of Georgia Owns.

Georgian Global Market (GGM)

- **1T GGM Coin Total Supply**
- 1T GGM Coin sits openly accessible to the entire Georgian Economy via the GDCM.

- The GDCM can vote on the opening price of GGM being listed on GGMX paired with GGX.
- Currency Pairing (GGM/GGX)
- Directly tying the market “door” to the market currency, as the market currency has been listed on a national exchange driving liquidity towards the GDCM and the global market liquidity has to interact first with the doorway to the market of Georgia.
- Two core assets driving financial autonomy and power into the hands of the Republic of Georgia.

The Independent, Republic of Georgia.
